Support a National FASD Strategy

Fetal Alcohol Spectrum Disorder (FASD) is an extremely complex disability that intersects with a number of different fields. Canada needs a coordinated, evidence-based approach to address FASD that ensures all people living with FASD in Canada and their families have full and equitable access to the resources they need – wherever and whenever they need them.

That is why CanFASD is asking for a National FASD Strategy: to identify of needs of individuals with FASD, those who are pregnant or planning to become pregnant, and those who support them, across Canada so that stakeholders can build appropriate and effective frameworks for better prevention, diagnosis and supports.
